

Express.js

1. What does this technology (library/framework/service) accomplish for you?

We used express.js to connect the frontend and backends, so that we can show or put data from/in the database. Express.js basically helps me manage everything, from routes, to handling requests and views.

2. How does this technology accomplish what it does?

Express.js is a third-party framework for handling http POST and GET request. Express.js is established on the built-in http module of node.js. The core feature of express is repacking http modules.

Used express.js to handle GET and POST routing by using the router object that acts as a middleware.

The documentation is on this link <http://expressjs.com/en/5x/api.html#router> and <https://github.com/expressjs/express/blob/master/lib/router/route.js>

3. License:

Express.js contributions will be under its MIT license. This license means we are free to use, copy, modify, merge, publish, and even sell the software that is made with Express.js which mean it gives very limited restrictions on reuse as long as we include the MIT copyright notice.
