Bootstrap

1. What does this technology (library/framework/service) accomplish for you?
Bootstrap is a framework that is used mostly for front-end development. It contains a collection of pre-compiled code in HTML, CSS, and Javascript for UI design. The one that we use specifically is the button.

- We used the Navbar, Nav, Form, and FormControl classes to accomplish the form. By using this the form is already styled nicely and the functionality such as auto-collapsing comes with it.
- We used Button class to create the like button. Same reasoning as above, it is already styled nicely too.

2. How does this technology accomplish what it does?
Bootstrap is basically a pre-compiled code of HTML, CSS, Javascript and JQuery. The library also has predefined classes that we can use to automatically add a bunch of lines of CSS to an element. For example, adding the class "danger" to a button will make it red.

https://github.com/twbs/bootstrap/blob/master/scss/forms/_form-control.scss
The FormControl used HTML and CSS created a search form.

https://github.com/twbs/bootstrap/tree/master/scss/forms
The Form used all these CSS files to handle the form to stays in the center of the page.

https://github.com/twbs/bootstrap/blob/master/scss/_nav.scss
The Nav handles all elements in the Navbar.

https://github.com/twbs/bootstrap/blob/master/scss/_navbar.scss
The Navbar created the navbar on the top of the page and in a light color.

3. License:

Bootstrap is released under MIT license and is copyright 2018 Twitter. This license means we are free to use, copy, modify, merge, publish, and even sell the software that is made with Bootstrap which means it gives very limited restrictions on reuse as long as we include the MIT copyright notice.
